"A pump and a receptacle fitted therewith"

10 The present invention provides a pump (1; 60; 90)
for mounting on a receptacle (3), the pump including:
- an air intake passage formed between the pump body
and the moving assembly and capable of communicating with
the opening (18) of the pump body;
- a first lip (40) arranged, after the moving
15 assembly has moved away from a rest position in the
substance-dispensing direction, to press in leaktight
manner against the pump body and prevent communication
between the inside of the receptacle and the pump chamber
(6) via the opening (18); and
20 - a second lip situated above the first lip when the
pump is observed in the head-up position, said second lip
being arranged to close the air intake passage when the
moving assembly is in its rest position and to release
said passage when the moving assembly (5) is displaced in
25 the substance-dispensing direction.
